

California Burclover

Description:

California Burclover is a summer annual weed. Burclover can be found throughout California in lawns and roadsides. Stems can be up to 2 feet long and tend to trail along the ground, but may grow upright. The trifoliate leaves resemble those of clover and usually have reddish-tinged mid-veins. Small, bright yellow flowers form in clusters at the end of stems. The first true leaf is rounded with a single leaflet. Later leaves have the characteristic clover like shape.
